Personal Profile

Hello, I'm Misha! I have started journey in a web development was html to create a webpage and inline styles of css, after I have the basics nailed down I create a few projects focused on mobile first when creating designs, and add the media queries for the larger screens after using: css grid & flexbox and TailWind. My next steps in programming was amaizing book of eloquentjavascript.net, where I have learned what is objects, functions, conditionals, loops and operators, modules, arrays, retrieving data from an API using FETCH API, manipulating the DOM and using events, async/await and etc... after I create more than 10 projects using vanilla javascript I look at React, where I learn how components are working, using state & props, JSX, how and when components re-render, react hooks, deployment on github pages and etc... Nowadays I am learnig node.js and other back-end concepts, also I am experienced with algorithms and data structures I have more than 100 days of coddng, which one you can see on my [gitHub](#) page .

Education
